## Description.

### Description

The elevator control gateway is a device between the building intercom system and the elevator control system. There are 5 modes defined in the elevator control system:

- The owner calls the elevator to go up
- The owner calls the elevator to go down
- The owner enables the apartment in which he resides for visits
- The owner opens the door when he receives a plate call.
- It asks for the status of the elevator and shows it on the screen. This device has 6 LEDs on the cover. It can display the command information and the STATUS + APARTMENT OF THE HOMEOWNER. If applicable, the ref. F01616 10 OUTPUT RELAY DECODER, must be configured in the first instance. Each of the NO/NC relays of the F01616 decoder is assigned to a floor, and this information must be recorded in an Excel file. Special software will be used to upload this information to the gateway.

Elevator control function compatible with digital panels; Not compatible with 1-line Milo boards

### Technical Details

#### Consumption:

- At rest: 60mA
- Operating: 110mA

#### Operating voltage:

- 12 Vdc

## Funcionament condition:

- Temperature: -40 oC – 55 oC
- Humidity: 10 – 93% (No condensation)

## Dimensions :

- 145x90x45mm
